

Core Depots vs Satellite Depots

RECYCLEBC™

Recycle BC allocated 11 **core** depots to the RDCK from which Recycle BC funds all post collection costs including hauling, processing and marketing of the recyclables, whereas at the 8 **satellite** depots the RDCK pays for the hauling to the next core depot or another consolidation point before Recycle BC accepts the materials. The RDCK elected to operate **satellite** depots to maintain previous local recycling services. On-site infrastructure, site maintenance, staffing, and other depot operational costs are paid by the RDCK, with some financial incentive provided by Recycle BC based on volumes accepted and material quality.

Core depots collect all Recycle BC's category types, however due to the additional hauling costs and space restrictions only the three main categories of recycling will be accepted at **satellite** depots: paper & cardboard, plastic & metal containers, and glass. These usually account for the majority of residential recycling so more regular trips to the depot can be completed at **satellites**, while styrofoam, plastic bags and other plastic films should be saved for trips to the nearest **core** depot. Descriptions of Recycle BC categories and acceptance at depots can be found at the RDCK's website www.rdck.ca/recycling_rdck.ca

CORE DEPOT LOCATIONS

Balfour Transfer Station
Crawford Bay Transfer Station
Creston (Helen Street) Recycling Depot
Edgewood Transfer Station
Kaslo Transfer Station
